
URBAN DESIGN WORKSHOP: NAVIGATING THE CITY

Help us make the city easier to navigate for those with sight loss.

Call for Participants!

Join us on 19 March 2016 for a creative workshop at Moorfields Eye Hospital. We are inviting those with inherited retinal conditions to work with leading researchers from UCL to explore the challenges of navigating the city with vision loss.

This day will be informal, informative and fun!

What will happen with my contribution?

Together we will help future research into vision loss by:

1. Highlighting the factors that most negatively impact on daily living to inform research questions and improve the relevance and quality of research;
2. Identify the aspects of vision loss that future treatments should be seeking to address.

How will this innovative day benefit me?

The workshop provides an opportunity to:

1. Share your experiences;
2. Meet new people with vision loss and learn from them;
3. Have your say and inform researchers about the aspects of living with vision loss that matter most to you.
